Parameters

Construction

Child manikin

Quantitative unit

ks

This full-body child manikin has been created to offer realistic training and practice of child airway management and CPR education. The Life/form® Basic Child CRiSis™ Manikin is anatomically correct in detail and represents the size of an 5-year-old child. Realistic anatomy and landmarks include a mouth, tongue, oral pharynx, larynx, epiglottis, arytenoids, vocal cords, trachea, and esophagus. In addition to the palpable and visual landmarks, the head, neck, and jaw are fully articulated, allowing a realistic jaw thrust feature. This manikin has separate left and right lungs for auscultation, has oral, nasal, and digital intubation capabilities, and includes an inflatable stomach bladder to indicate esophageal intubation. Also features E.T., E.O.A., P.T.L., L.M.A., E.G.T.A., and Combitube® insertion. Includes pump spray lubricant. Also includes blood pressure arm, defibrillation chest skin, femoral access leg, intraosseous infusion, IV arm, and palpable carotid pulse (manual). Full body manikin is 46-3/4 in. long and weighs 20 lbs. Hard carry case (LF03467U) and Interactive ECG Simulator (LF03670) are available separately.
