LF00961 - Intramuscular Injection Simulator

Order code: **4107.LF00961**

Cena bez DPH

1.053,00 Eur

Price with VAT

1.274,13 Eur

Parameters

Cannula, injection, puncturing - filter

Buttock

Quantitative unit

ks

Here is the perfect volunteer for training your beginning health care students to administer intramuscular injections. Always available for class demonstrations or practice by groups of 1 to 30, the Life/form® Intramuscular Injection Simulator offers both visual and tactile learning. A simulated bony structure is embedded in the torso and represents the superior end of the femur, or greater trochanter, the posterior superior and anterior superior iliac spines, and the sacrum. The bony structure provides palpable anatomical landmarks so students can identify proper injection sites. A section of the upper, outer quadrant of the left gluteal area is cut away to allow students to visualize the underlying structures. The gluteus medius and gluteus maximus muscles, sciatic nerve, and vascular structures are clearly shown. Three types of intramuscular injections can be taught and practiced on this simulator: dorsogluteal, ventrogluteal, and vastus lateralis injections. As with all Life/form® replicas and simulators, the Intramuscular Injection Simulator is extremely realistic. Skin and muscle textures, as well as bone shape and position, closely resemble a live patient. As a result, perforation of the tissue with a needle duplicates the sensation of administering an actual injection. Comes complete with teaching guide, supply of syringes, and hard carrying case. Three-year warranty. Carton size: 22" x 16" x 10" (56 x 41 x 25 cm). Sh. wt. 18 lbs. (8.16 kg).
