- Detailed description

Specially developed for Zilgri training, but also suitable for physiotherapy, massage and music teaching institutions (singers, wind players)

and for orthopaedics. Femoral movements at the hip joint can be imitated in this model. The femurs can be raised and lowered respectively and unilateral shortening of the leg and the resulting pelvic inclination can be simulated. How this is compensated for in the pelvis and vertebral column can be shown in the model. Mounting of the rib cage (thorax) with the shoulder girdle allows explanation of the combination of movements of the vertebral column and thoracic cage during breathing and respiratory gymnastics. Easily removed from stand.

Size: 78 cm

Weight: 5400 g
