Cannula, injection, puncturing - filter

Dolní končetiny

Quantitative unit

ks

The Mike and Michelle intraosseous leg simulates that of an average one year old child. The leg is attached to a half section of a lower torso. A replaceable tibial bone lies under a smooth outer skin, and is molded with anatomic landmarks for teaching intraosseous access and infusion.

- Intraosseous vascular access
- 16 interchangeable, realistic tibial bones
- Realistic "pop" as needle penetrates cortex and enters bone marrow
- Blood return upon successful entry
- Infusion of fluid/medications
- Easily replaceable skins and veins that withstand multiple needle sticks
- Mounted on smoked Lucite base and supplied with blood bag and stand, synthetic blood concentrate, squeeze bulb, and spare leg skin
- Soft carrying bag
- Instruction manual
