- Detailed description

A complete life size female pelvis of synthetic bone-like material with a highly detailed and dissectible pelvic floor in carefully coloured flexible material comprising genitalia and associated muscles.

The superior view shows the pelvic floor formed by the pubococcygeus, iliococcygeus and coccygeus muscles supported partially by the internal obturator muscles.

The external genitalia are accompanied by the bulbocavernosus, ischiocavernosus and superficial transverse perineal muscles. Posterior to the central point of the perineum the external anal sphincter converges on to the coccyx. On one side the vestibular bulb and Bartholins gland are visible and part of the inferior fascia has been removed to show a section of the deep transverse perineal muscle.

Separates into 5 parts.
