- Detailed description

This brand new rescue manikin comes un-weighted and allows you do add your own weight. This feature saves on shipping costs and makes it easier to transport. The manikin is made from rugged polyethylene parts that allow for the addition of varying amounts of weight

to each of the pieces. You may add water, sand, or any other substance as long as you can empty the substance out of the parts. The empty manikin is easily moved and stored when training is completed. This custom-molded construction ensures constant size from one manikin to the next and allows the utilization of Randy 9000 in every environment imaginable. Each sealed piece is assembled with stainless steel hardware. The range of motion of the joints, including bending at the waist, mimics real life. Randy 9000 may be used in all weather conditions and the joint design protects rescuers' fingers. Each manikin component is easy to replace.
