Parameters

Quantitative unit

ks

This item allows the study of the magnetic field generated by a solenoid, because it is possible to vary the coil number per length measurement unit. Once the magnetic needle has been positioned toward the earth field and the solenoid has been positioned in a perpendicular direction, the tangent of the needle's deviation angle is proportional to the intensity of the magnetic field and, therefore, to the intensity of the electric current and to the number of coils for length measurement unit.

To be used with generator code 5001.5230 or to be powered through a battery in series with resistance.

Dimensions: 700 × 135 × 20h cm
