This experimentation system allows for the application of different technologies of solar thermal energy transformation in technical education. The product does not only contain various solar collector systems, which can be operated with or without pumps, but also CSP-

technology (Concentrated Solar Power) and a Peltier element for the direct transformation into electric energy. Another main feature are the experiments regarding the basics of thermodynamics, like absorption of heat radiation and the convective flow of heat, that provide a comprehensive understanding of the applied physical effects. Like the other products of the Professional line, the leXsolar-ThermalEnergy Professional amazes with its flexible and location-independent usability that doesn't require any additional equipment.
