For measuring magnetic flux density of small fields in the axial direction with CASSY (5210.524013, 5210.524006, 5210.524009A, 5210.524018) or universal physics measuring instrument (5210.531835). For example, useful in measuring the earth's magnetic field (40 ...

60 μT) or for measuring a field surrounding a current-carrying conductor for direct and alternating currents (Biot-Savart). Including a nonmagnetic stand rod with thread.

Technical Data:

- Measurement ranges: $\pm 30/\pm 100/\pm 300 \mu\text{T}$
- Compensation: up to 300 μT in each measurement range
- Frequency limit: 100 Hz in the 300- μT measuring range
