PELVIC MENTOR PLATFORM

PELVIC Mentor™ is an integrated hybrid system that combines a physical mannequin with a computerized 3D virtual system.

The innovative PELVIC Mentor's utilizes sensors that are placed on the trainee's finger. These sensors, combined with the mannequin and the 3D picture, enable the trainee to obtain a real-time indication of the finger palpation, abdominal press and cervix manipulation during anatomical recognition phase, or while performing a pelvic exam.

The system tracks the trainee's movements and provides a full performance report on the progress and level of the trainee.

The system was designed with an attractive yet smart design that is ideal for the learning experience.

Replacement mechanism – The PELVIC Mentor contains various interchangeable anatomies that represent normal and pathological pelvic anatomy so that learners can experience different anatomical structures.
