Parameters

Quantitative unit

ks

Microprocessor-controlled regulator, compact housing with transparent lid, indicator lights for power, function and failure (sensor break), PID characteristic, one display to indicate nominal and actual value, operable with function keys, adjustment through parameter level, sensor input: Pt-100, free adjustable temperature range 0 - 450°C, switching capacity up to 10 A.

- Switching capacity: 2300 W
- Temperature range: 0 - 450°C
- Connection: power supply cable
- Switching current: 10 A
- Nominal voltage: 230 V AC
