Parameters

Quantitative unit ks

airway management task trainer, for intubation training and more. Made out of 3D printed and silicone cast parts. Strengthened with power mesh in multiple places inside the airway and the mouth area. Anatomically correct.

LEARNING OBJECTIVES

Use it to teach:

- intubation algorithms
- laryngeal anatomy
- mask ventilation
- the use of different laryngoscopes and supraglottic devices
- nasal intubation

Main features

made using real data

to make sure that our airway management trainer reflects real anatomy, we used MRI data and photogrammetry files in the design process.

hand-made with attention to details

every task trainer we make goes through diligent quality control.

adjustable difficulty

the intubation difficulty can be easily adjusted (grades 1 to 3 in

Cormack-Lehane scale)

stiff neck

To make the training even more demanding, you can limit the neck mobility.

realistic landmarks

landmarks include:

true and false vocal cords, posterior cartilages, epiglottis, interarytenoid notch and more

box contents

- silicone airway blockages
- 4 x different teeth patterns
(including buck teeth and missing teeth)
- 2 x cric membrane
- 2 x neck skin
- airway lubricant
- USB with instructions
- carry bag
