The Shrapnel Wound Trainer is an incredibly lifelike simulation tool designed to replicate the effects of shrapnel on soft tissue. Its primary focus is to educate students on the proper techniques for treating shrapnel wounds. Meticulously crafted using high-quality silicone rubber, the trainer authentically mimics the texture and appearance of real skin and tissue. This meticulous construction ensures an exceptionally realistic simulation of a shrapnel wound, enhancing the training experience.

Furthermore, the trainer seamlessly integrates with a comprehensive bleeding simulation set. This integration allows for the realistic replication of bleeding scenarios, providing students with a comprehensive training experience. By combining the tactile feedback of the simulated wound cavity with visual indicators of bleeding, students can refine their skills in treating shrapnel wounds with heightened accuracy and effectiveness.

The Shrapnel Wound Trainer offers an immersive and detailed training environment, enabling students to gain practical hands-on experience in managing shrapnel wounds. It serves as a vital tool for preparing individuals to confidently and adeptly handle real-life situations, ensuring they are well-prepared to deliver optimal care when faced with emergencies.

Set Contents: WP trainer, Squeeze bottle, Silicone tube, plastic connector and a plastic clamp

Size: L 11.5cm X H 5.5cm X W11cm

Weight: 420 grams
