The Open Forearm Fracture Wearable Wound is an innovative simulation device specifically designed to replicate open fractures in the forearm. Its primary objective is to educate students on the proper techniques for managing and dressing open fractures in this critical region.

The wearable design of the Open Forearm Fracture Wearable Wound allows for direct interaction with the simulated wound cavity on the forearm, providing a practical and immersive learning experience.

Our new system of attachment will help the users to adjust the simulator tight and comfortably on the body.

In summary, the Open Forearm Fracture Wearable Wound is an exceptional training tool that offers a high level of realism and usability. With its forearm-specific design and two attachment options, it provides a comprehensive training experience for individuals looking to enhance their management and dressing skills for open fractures in this critical area.

Set Contents: Wearable Wound, Squeeze bottle, Silicone tube, plastic connector and a plastic clamp

Size: L 24cm X H 0,5cm X W27cm

Weight: 350 grams
